Worksheet 2

Student Name: Saloni Kumari **UID:** 25MCA20087
Branch: MCA **Section/Group:** 25MCA-2-A
Semester: 3rd **Date of Performance:** 12-08-2026
Subject Name: Business Analytics **Subject Code:** 25CAH-703

1. Aim/Overview of the practical:

To analyze a sales dataset in using Pivot Tables and Pivot Charts for summarizing, comparing, and interpreting business information.

2. Objective:

- To understand the purpose and working of Pivot Tables in Microsoft Excel.
- To summarize sales data using different row fields and value calculations such as Sum and Average.
- To create Pivot Charts from Pivot Table summaries for clear visual representation of business data.
- To interpret sales performance across cities, products, and salesmen for better business decision-making.

3. Apparatus / Requirements:
Microsoft Excel

4. Procedure/Code

Step 1: Create a sales data table with the columns Salesman Name, Product, Price, City, Quantity Sold and Total Sales.

Step 2: Enter 50 sales records in the worksheet and calculate Total Sales using Price × Quantity Sold.

Step 3: Select the complete data range and choose Insert → PivotTable.

Step 4: Create separate Pivot Tables by placing the required field in Rows and the required numerical field in Values.

Step 5: For each Pivot Table, choose the appropriate calculation such as Sum or Average from Value Field Settings.

Step 6: Select each Pivot Table and use Insert → PivotChart to create a suitable chart for visual analysis.

1. Pivot Table 1 – City-wise Total Sales

Pivot fields: Rows: City | Values: Total Sales → Sum

This Pivot Table groups all sales records according to City and calculates the Sum of Total Sales for each city.
It represents the sales contribution of different cities and helps identify the strongest and weakest sales locations.

The chart compares total sales across cities visually.

PIVOT 1 – CITY SALES

City	Total Sales
Amritsar	₹28,74,500
Delhi	₹27,53,700
Mumbai	₹26,35,600
Dehradun	₹25,92,300
Ahmedabad	₹25,89,500
TOTAL / SUMMARY	**₹1,34,45,600**

Fig.1 Total sales generated by each city | Sorted highest to lowest

---

2. Pivot Table 2 – Product-wise Quantity Sold

Pivot fields: Rows: Product | Values: Quantity Sold → Sum

This Pivot Table groups the records by Product and calculates the Sum of Quantity Sold. It represents product demand and shows which products were sold in higher quantities.

The resulting chart makes it easy to compare the quantity sold for each product.

PIVOT 2 – PRODUCT QUANTITY

Product	Total Quantity Sold
Monitor	259
Smartphone	221
Printer	218
TOTAL / SUMMARY	**698**

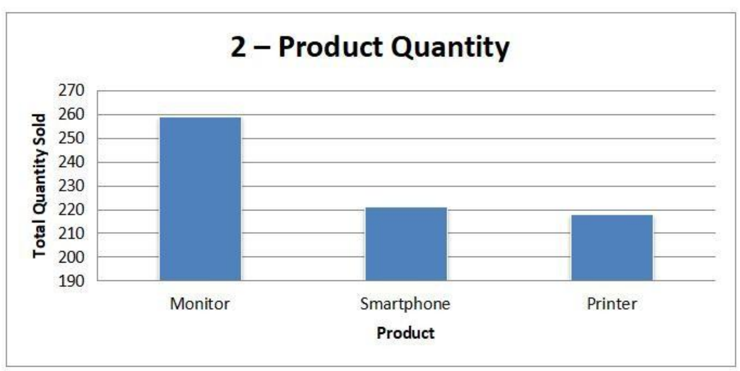

Fig.2 Total quantity sold by each product | Sorted highest to lowest

3. Pivot Table 3 – Salesman Performance

Pivot fields: Rows: Salesman Name | Values: Total Sales → Sum

This Pivot Table groups sales according to Salesman Name and calculates the Sum of Total Sales. It represents individual sales performance and helps compare the contribution of different salesmen. The chart provides a visual comparison of sales generated by each salesman.

PIVOT 3 – SALESMAN PERFORMANCE

Salesman	Total Sales
Ishita Verma	₹15,77,700
Sara Chawla	₹13,12,200
Reyansh Jain	₹12,34,600
Aarav Mehta	₹11,09,900
Arnav Khanna	₹10,56,700
Rudra Sethi	₹10,46,500
Diya Sharma	₹9,68,300
Vihaan Kapoor	₹9,06,000
Myra Malhotra	₹8,26,000
Kabir Gupta	₹7,17,000
Kiara Nair	₹6,71,600
Advik Bansal	₹5,97,200
Yuvan Joshi	₹5,35,500
Anaya Singh	₹4,69,000
Aadhya Arora	₹4,17,400
TOTAL / SUMMARY	**₹1,34,45,600**

Fig.3 Sales contribution by salesman | Sorted highest to lowest

---

4. Pivot Table 4 – Average Price by City

Pivot fields: Rows: City | Values: Price → Average

This Pivot Table groups products by City and calculates the Average of Price. It represents the average selling price recorded in each city and helps compare pricing levels.

The chart compares the average price across different cities.

PIVOT 4 – AVERAGE PRICE

City	Average Price
Dehradun	₹20,360
Mumbai	₹20,320
Amritsar	₹19,250
Delhi	₹19,210
Ahmedabad	₹18,790
TOTAL / SUMMARY	**₹19,586**

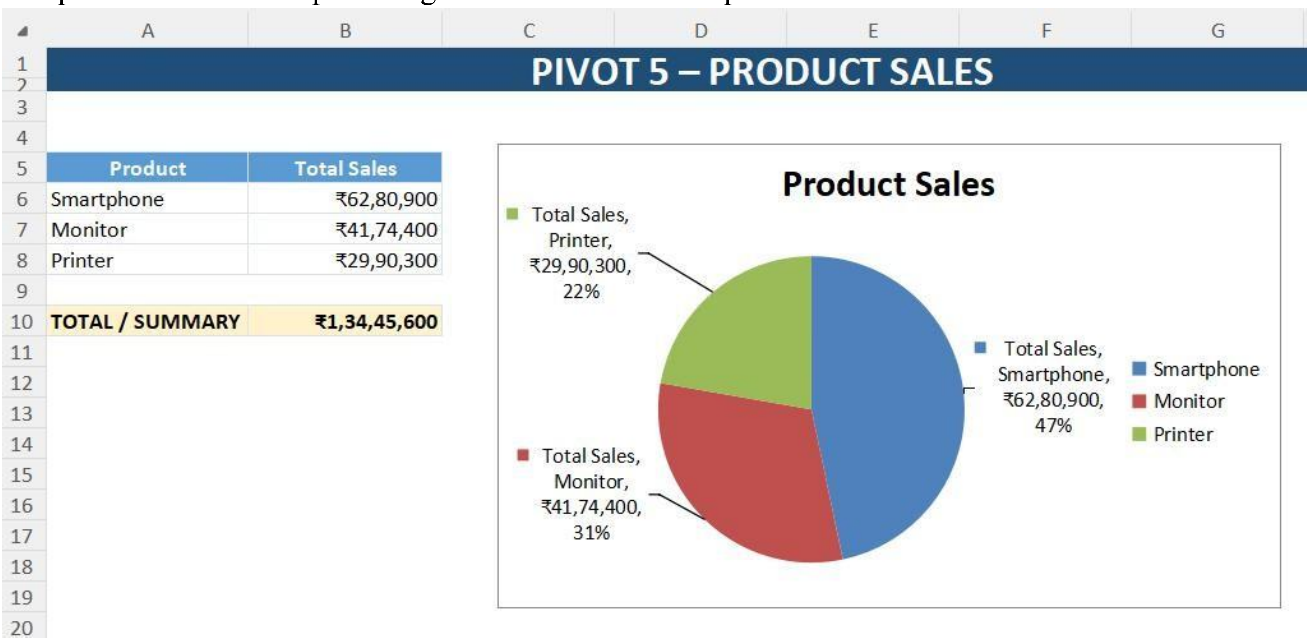
Average selling price by city | Sorted highest to lowest

5. Pivot Table 5 – Product-wise Total Sales

Pivot fields: Rows: Product | Values: Total Sales → Sum

This Pivot Table groups sales by Product and calculates the Sum of Total Sales. It represents each product's contribution to overall sales and is useful for understanding the sales mix.

The pie chart shows the percentage contribution of each product to total sales.



Fig,5 Product-wise sales contribution | Pie chart shows percentage share

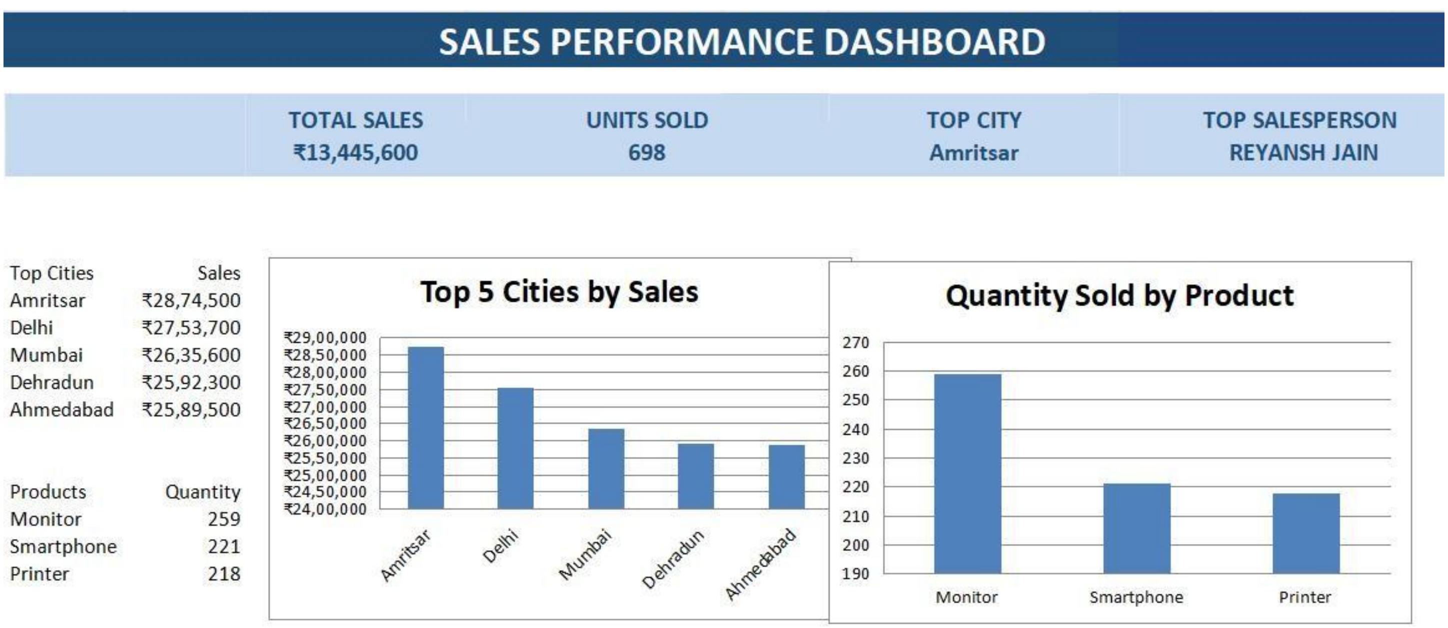


Fig.6 Final Dashboard

6. Learning outcomes (What I have learnt):

- Understood how Pivot Tables can be used to organize and summarize large sales datasets efficiently.
- Learnt to select appropriate row fields and value fields and apply Sum and Average calculations in Pivot Tables.
- Learnt to create Pivot Charts such as Column and Pie Charts from Pivot Table summaries.
- Developed the ability to interpret city-wise, product-wise, and salesman-wise sales information for meaningful business analysis.
- Improved practical skills in presenting Excel-based analytical results in a clear and professional format.

7. Conclusion:

The practical demonstrated how Pivot Tables and Pivot Charts can convert raw sales records into meaningful summaries and visual insights. Different Pivot Tables were created to analyze city sales, product quantity, salesman performance, average price, and product-wise sales contribution.
